3D In-Browser Engine

🌐 100% on-line and shareable via links

OVERVIEW

Exploit your models locked up in the PLM system. This online tool uploads all parts of a machine from a zip file and recreates a virtual twin. It allows the user to navigate through the machines, manipulate them, review their electrical schemas and order missing parts.
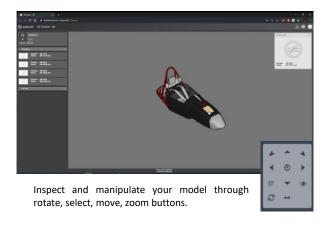

It can be paired up with a myriad of systems, including an Online Parts Ordering as well as Sales Configurators, or can be used on its own to showcase them to clients via a link.

The 3D canvas is used to display the digital 3D representation of the machine and allow users to navigate through and manipulate it. This functionality is available to all users.

FEATURES

Navigate the entire machine, specific assembly or part that belongs to it.

Inspect and manipulate your model through rotate, select, move, zoom buttons.

- In-browser – can be shared via links
- Supports up to 100k parts
- Can be used for an Online Sales Configurator or Parts Ordering
- Virtual substitute for heavy machinery
- Uploads in seconds
- Detailed view of each part in context of its family or on its own + all corresponding information
